London, UK | +44 7546 262955 | wuxuyi001@gmail.com | xuyiwu.com

PROFILE

Big 4 trained, ACA-qualified accountant with seven years in finance and four in fund reporting and reporting operations. Currently produce the quarterly performance reporting for a private markets investment firm's fund estate, owning the refreshable templates behind NAV, IRR and TVPI and acting as the point of contact for ad hoc fund and investor-level data requests. Build automated reporting solutions in Excel and Python to remove manual production steps and the operational risk attached to them. CFA Program Level I.

EXPERIENCE

Bregal Investments — Finance Analyst, Financial Operations & Transformation

Apr 2026 – present

- Produce the quarterly fund performance reporting across the firm's fund estate to a fixed deadline, sourcing and validating fund-level data from the accounting team and working with the portfolio team on the combined reporting document.
- Reconcile the London fund numbers to the Jersey-domiciled partnerships that invest into them, both maintained in the fund accounting system. Where the two do not agree, establish the likely cause before raising it — most often a timing difference between payment and receipt, or a different FX rate applied on booking — so the difference goes to the Jersey team with a diagnosis attached rather than as an open query.
- Point of contact for ad hoc fund and investor-level data requests from fund managers and the wider business — capital calls, distributions, NAV since inception, AUM and invested cost — extracted from the fund accounting system and checked before release.
- Own the refreshable templates calculating NAV, IRR and TVPI, extending them as funds and investors are added. Diagnosed a life-to-date IRR returning 0% as a convergence limitation in the template's solver and corrected it at formula level, so every fund the template runs now reports correctly.
- Built a Python comparison for a consolidated sign-off cycle spanning c.150 funds and eight to nine versions, reporting differences at fund and line-item level so reviewers verify only what moved rather than re-reading hundreds of rows; replaced a fixed-formula Excel check that broke whenever rows or columns shifted. Separately automated the transfer of reporting pack figures from Excel into PowerPoint, removing the transcription step.
- Led historic data remediation across multiple credit fund vehicles: migrated the administrator's journal entries into the fund system, built trial balance, investor capital account and deal-position reconciliations, traced differences to origin as far back as 2018, and left standing quarterly checks against the administrator's books.
- Reverse-engineered the firm's principal fund-level reporting model, a large undocumented Excel build, working out around 90% of it independently: how the data extracts from the fund accounting system, why transactions are tagged as they are, the logic linking the tabs and how the aggregation avoids double-counting across vehicles. Asked to formalise it; two process documents delivered covering the steps and the reasoning behind them.

Langham Hall LLP — Fund Accountant

Mar 2024 – Jan 2026

- Owned quarterly and annual reporting end to end for an allocated portfolio of SPVs, unit trusts and master-feeder structures, preparing consolidated financial statements and NAVs under IFRS and US GAAP.
- Primary finance contact for investors and fund managers: presented financials at board meetings, prepared board and investor analysis and presentation material, and handled ad hoc LP queries alongside the reporting cycle.
- Ran the capital call and distribution process, including waterfall, equalisation, carried interest and fee calculations in line with the LPAs, and prepared rolling fund-level cash flow forecasts.
- Calculated investor returns — IRR, money multiples and TVPI — and analysed asset-level performance drivers for management reporting.
- Reviewed junior colleagues' output for technical accuracy, resolving accounting treatment issues before submission, and supported migration to a new in-house reporting system through cross-team data transfer and validation.

Deloitte LLP UK — Audit, graduate scheme to Assistant Manager

Sep 2019 – Feb 2024

- Led engagements through the full audit cycle under IFRS, US GAAP and FRS 102, covering valuation methodology, impairment testing, revenue recognition and financial instrument disclosures. Qualified ACA and progressed to Assistant Manager.
- Used Python to clean and structure large transactional datasets extracted from client accounting systems, testing completeness and accuracy across full populations rather than samples.
- Acted as field manager and client point of contact on site, running the day-to-day team and client relationship; performed actual vs prior period and actual vs expectation analytical review in Excel and Power BI to direct testing at the variances that mattered.

SKILLS

Excel (advanced) — refreshable template design, INDEX/MATCH-based builds that survive source changes, control and checker tabs, in-file variance flagging | Python — data cleaning over large datasets, file version comparison, Excel-to-PowerPoint automation | Investran — posting, standard and custom reports, extraction, transaction tagging | Power BI and Tableau — analytical review in audit and independent projects | IFRS, US GAAP, FRS 102

EDUCATION AND QUALIFICATIONS

ACA (ICAEW), qualified | CFA Program Level I | MSc Finance & Management (Merit), Loughborough University | BA, Northeast Agricultural University, (UK equivalent 2:1)

Independent projects — xuyiwu.com: published financial modelling and portfolio analytics work, including a REIT cashflow and dashboard case, an LBO model with credit metrics and sensitivity analysis, and waterfall and capital call calculation material.
